TQMa6ULx

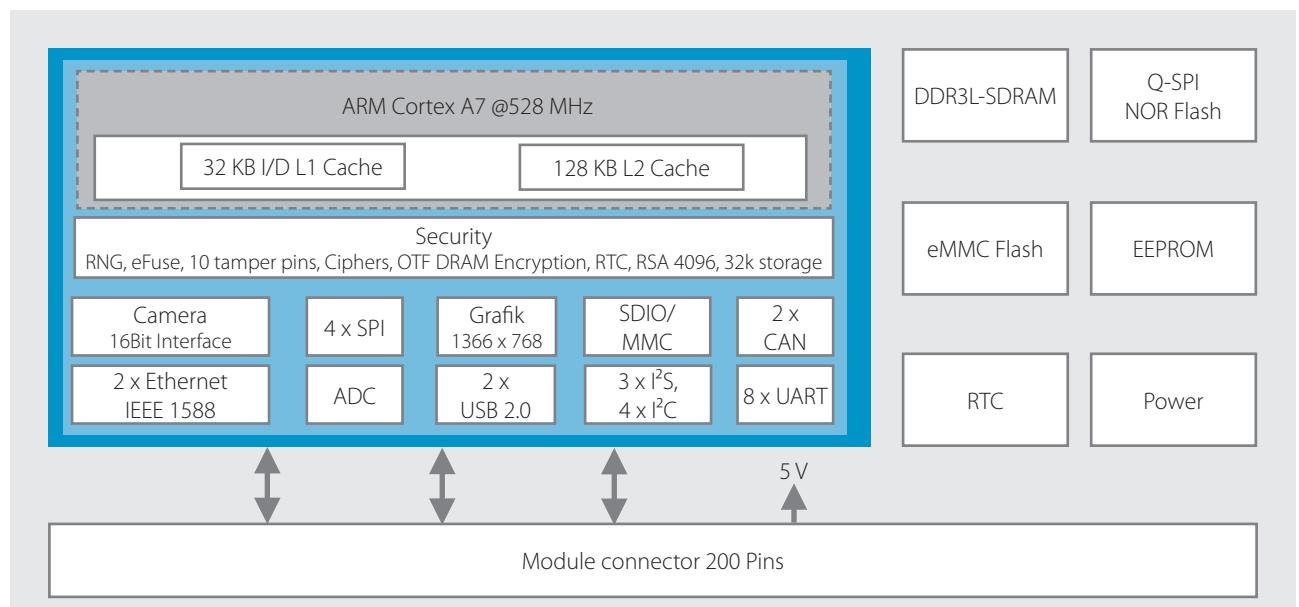

Energy efficient for future designs

The Minimodule TQMa6ULx, based on the i.MX6UL from NXP, combines the ARM Cortex-A7 core technology with a variety of interfaces. The integrated graphics controller supports applications with display and touch screen requirements. For various applications such as, industrial automation and controls with requirements for low power and secure data processing, there are three CPU variants available. With a Single Cortex™-A7 core and a clock rate up to 528 MHz the TQMa6ULx provides a balanced ratio between applications for visualization and control performance and power dissipation.

The highlights:

- Graphic
- Extended temperature range
- 2x Ethernet with IEE1588
- Low power consumption (typ. 1 W)
- Camera Sensor Interface
- Security functions
- Long term availability

Starter kit STKa6ULx set

The core of the STKa6ULx set is the TQMa6ULx module with a Cortex-A7 CPU. The components contained in the starter kit constitute a modular system enabling you to develop your own product ideas. Development of graphic interfaces can be started immediately using the prepared combination of closed display unit and starter kit that are matched to each other. To develop your own hardware you can use the certified and qualified circuit components of the starter kit in your own designs.
